HOPE, INC. ERP

SPRINT 1 TEST PLAN

Test Cases

For each test case, follow the steps and compare the actual result with the expected result. Record Pass, Fail, or Blocked after execution.

Registration, Login, Logout, Set Password and Reset Password

Scenario	Steps	Expected Result	Status
Register with valid required details	Open registration; enter valid details; submit.	Account is created and the system shows the correct next step/status.	
Register with missing required fields	Leave a required field blank; submit.	Registration is rejected and the missing field is identified.	
Register using an existing account identifier	Enter an email/username already registered; submit.	Duplicate account is rejected with a clear message.	
Login with valid credentials	Open login; enter an active account's correct credentials.	User is authenticated and redirected to the appropriate page for the role.	
Login with incorrect password	Enter a valid account identifier and an incorrect password.	Login is rejected; protected pages remain inaccessible.	
Login with blocked account	Attempt login using a blocked User account.	Login is denied and the account cannot access protected pages.	
Logout	Log in; select Logout; try to return to a protected page using browser navigation.	Session ends and protected pages require authentication again.	
Set password on first login with valid link	Open a new account's one-time set-password link; enter a valid password and confirm it.	Password is saved and the user can log in with the new password.	
Set password with mismatched entries	Enter different values in password and confirmation fields.	Password is not saved and a validation message is shown.	
Reuse a set-password token	Complete set-password, then open the same link again.	Previously used token is rejected.	
Request password reset	Select Forgot Password; submit a registered email address.	System confirms the request and sends a reset link/token to the registered email.	
Reset password using valid token	Open a valid reset link; enter and confirm a new password.	Password is updated and the user can sign in using the new password.	
Reset password with expired token	Open a reset link after its validity period.	System rejects the expired token and does not change the password.	
Reuse a password-reset token	Complete a password reset; open the same link again.	Previously used token is rejected and cannot change the password again.	

User Management

Scenario	Steps	Expected Result	Status
Add a User	As an authorized manager, open User Management; select Add User; enter valid details; save.	New User appears in the list with the correct details and status.	Not Run
Add User with missing/invalid details	Submit the Add User form with missing or invalid required data.	System blocks the save and displays validation messages.	Not Run
Edit a User	Open an existing User; change an editable field; save.	Updated information is displayed in the User list/details.	Not Run
Block a User	Select Block for an active User and confirm if prompted.	User status changes to Blocked; the action changes to Unblock; account cannot sign in.	Not Run
Unblock a User	Select Unblock for a blocked User.	User becomes active and can sign in with valid credentials.	Not Run
Approve a registered account	Open a pending registered account; perform the approval action.	Account status changes to approved and follows the expected access flow.	Not Run
Designate a User as Admin	Use the authorized role assignment action for an eligible account.	Account role changes to Admin and the correct Admin access is applied.	Not Run
Admin views User	Sign in as Admin and open User	Superadmin accounts are hidden from the Admin	Not Run

Management	Management.	list.	
Admin attempts to edit another Admin row	As Admin, locate another Admin row in User Management.	Actions for another Admin row display "—"; Admin cannot edit or manage that row.	Not Run
Admin attempts to access Superadmin account directly	As Admin, attempt to open a Superadmin record or use its direct page/action URL.	Access is denied; Superadmin data/actions are not exposed to Admin.	Not Run
Prevent removal/blocking of the last Superadmin	As an authorized role, attempt the protected action that would leave no Superadmin account.	System prevents the action and keeps at least one Superadmin account active.	Not Run

General Role and Menu Checks

Scenario	Steps	Expected Result	Status
Superadmin dashboard	Sign in as Superadmin and review sidebar, module tiles, and allowed actions.	Menu and actions match Superadmin role and assigned rights.	Not Run
Admin dashboard	Sign in as Admin and review sidebar, module tiles, and allowed actions.	Menu and actions match Admin role and assigned rights; restricted Superadmin management is unavailable.	Not Run
User dashboard	Sign in as regular User and review sidebar, module tiles, and allowed actions.	Only modules/actions allowed by the User's rights are shown and usable.	Not Run
Direct URL/server permission check	For a right that is not assigned, attempt the corresponding protected action through a direct request or URL.	Server denies the action even if the user bypasses the interface.	Not Run
Rights dialog All and None shortcuts	Open Rights dialog; use All and None for a module; save and reopen.	All selects the module's available actions; None clears them; saved choices remain correct.	Not Run
Module checkbox behavior	Toggle a module checkbox and inspect its child rights; save and reopen.	Module checkbox switches the module on/off as designed and child selections are saved correctly.	Not Run

Acceptance Criteria

- Registration accepts valid details and rejects missing, invalid, or duplicate account information.
- Active users can log in; incorrect credentials and blocked accounts cannot log in.
- Logout ends the session and protected pages cannot be accessed without signing in again.
- First-login set-password and password-reset links work as intended; expired and reused tokens are rejected.
- Authorized managers can add, edit, approve, designate Admin, and block/unblock eligible User accounts.
- Admins cannot view or edit Superadmin accounts. Other Admin rows show "—" in Actions for an Admin viewer.
- The system prevents an action that would leave the system without an active Superadmin account.
- All 36 per-action rights across Customer, Product, Human Resources, Sales, and Reports are tested.
- Menus, module tiles, and action buttons reflect the signed-in user's role and assigned rights.
- Every restricted action is also enforced by the server; direct requests cannot bypass permissions.
- Rights dialog module checkboxes and All/None shortcuts save and display the correct selections.
- All test cases have an execution status and actual result recorded; failed cases have a defect reference or explanation.
